

Resume Templates for Engineering Students

Resume format

For most engineering students, the best format is **reverse chronological** because recruiters want to see your most recent education, projects, and internships first. A one-page resume is usually preferred for students, with a clean layout, professional email, and clear section headings.

Recommended structure

- Header.
- Summary or objective.
- Education.
- Technical skills.
- Projects.
- Internships or experience.
- Certifications.
- Achievements.
- Optional links such as GitHub, portfolio, or LinkedIn.

Formatting rules

- Use a single-column layout.
- Keep margins around 0.5 inch to 1 inch.
- Use 10–11-point font for body text.
- Use a bold name heading.
- Avoid photos and unnecessary personal details.

Best template style

The best template for engineering students is simple, ATS-friendly, and achievement-focused. Avoid heavy graphics, icons, tables, or decorative elements that can confuse applicant tracking systems.

Good design principles

- Use black text on white background.
- Keep spacing consistent.
- Use bullet points instead of paragraphs.
- Start each bullet with an action verb.

BrainStack

- Quantify results whenever possible.

Section-by-section guide

Header

Include your full name, phone number, professional email, city, and optional LinkedIn/GitHub/portfolio links. Do not include unnecessary personal details.

Summary or objective

Use a 2–3-line summary if you already have projects, internships, or strong technical skills. If you are a fresher, use a concise objective focused on your target role.

Example:

Final-year CSE student with strong skills in Python, Java, and web development, seeking an internship in software engineering. Built multiple academic projects with focus on clean design, problem-solving, and teamwork.

Education

List your most recent degree first and include institution name, degree, branch, dates, and GPA if it is strong. Relevant coursework is optional and should be selective.

Technical skills

Group skills clearly, such as:

- Programming languages.
- Frameworks/libraries.
- Tools and platforms.
- Databases.
- Operating systems.
- Version control.

Projects

Projects are often the most important section for students. Each project should show what you built, what tools you used, and what impact or result it had.

Experience or internships

Include internships, research, freelance work, lab work, and relevant part-time roles. Use bullet points with measurable outcomes where possible.

Certifications and achievements

Add only relevant certifications, hackathon wins, coding contest ranks, scholarships, or leadership roles.

Template examples

1. Fresher engineering resume template

text

YOUR NAME

Phone | Email | City | LinkedIn | GitHub

SUMMARY

Motivated engineering student with strong problem-solving skills and hands-on experience in academic projects.

EDUCATION

B.Tech in Computer Science Engineering

College Name, City

2022 – 2026

CGPA: 8.5/10

TECHNICAL SKILLS

Languages: Python, Java, C++

Tools: Git, GitHub, VS Code

Databases: MySQL

Concepts: OOP, DSA, DBMS

PROJECTS

Weather App

- Built a Python-based weather app using API integration
- Retrieved live weather data and displayed temperature, humidity, and condition

Number Guessing Game

- Developed a C++ console game using loops and random number generation
- Added input validation and try counting

CERTIFICATIONS

- Python for Everybody
- Java Programming Basics

ACHIEVEMENTS

- Hackathon finalist
- Solved 100+ coding problems

This style is consistent with university engineering resume guidance emphasizing education, skills, and projects.

2. Internship-focused template

text

YOUR NAME

Phone | Email | LinkedIn | GitHub

SUMMARY

Engineering student with internship experience in software development and strong foundation in programming and teamwork.

EDUCATION

B.Tech in Electronics and Communication Engineering

College Name

2022 – 2026

SKILLS

Programming: Python, C, Java

Tools: MATLAB, Git

Domain: Embedded systems, circuit analysis

INTERNSHIP

Software Intern, Company Name

Month Year – Month Year

- Assisted in testing and debugging internal tools
- Automated routine tasks and improved reporting efficiency

PROJECTS

Smart Attendance System

- Designed a face-recognition-based attendance prototype
- Used Python and OpenCV for detection and logging

This template works well when you have internship experience to show alongside academics.

Engineering-specific tips

Engineering resumes should show both technical depth and practical execution. Recruiters like to see tools, technologies, methods, and project outcomes, not just course names.

Strong bullet style

Use this formula:

- **Action verb + what you did + result.**

Example:

- Developed a Python weather app using API integration, enabling real-time weather lookup for any city.

What to avoid

- Too many soft skills without proof.
- Generic objectives.
- Photos and personal data.
- Long paragraphs.
- Unclear project descriptions.
- Spelling and grammar errors.

ATS and recruiter readiness

ATS-friendly resumes are easier for recruiters and parsing software to read. That means using standard section names, simple formatting, and keyword alignment with the job description.

ATS best practices

- Use standard headings like Education, Skills, Projects, Experience.
- Match keywords from the job description.
- Avoid complex graphics.
- Save as PDF unless otherwise instructed.
- Keep file name professional.

Recommended templates by stage

Student stage	Best template style	Main focus
First-year student	Simple academic template	Education, skills, basic projects.
Second/third-year student	Project-heavy template	Technical skills, projects, hackathons.
Final-year student	Placement-ready template	Projects, internships, measurable results.
Strong internship candidate	Experience-focused template	Internships, tools, outcomes.

Example content ideas

If you are a CSE student, include:

- Python, Java, C++, JavaScript.
- Git and GitHub.
- SQL or MongoDB.
- Web or app projects.
- DSA practice.
- Cloud or deployment basics.

If you are ECE or other engineering branch, include:

- MATLAB, Simulink, SPICE, Embedded C, Arduino, PCB tools.
- Lab projects.
- Hardware or automation projects.
- Signal processing or IoT work.

Final checklist

Before sending your resume, check:

- One page only if you are a student.
- No spelling mistakes.
- Clear section order.
- Relevant keywords.
- Quantified achievements.
- Clean formatting.
- PDF export looks correct.

Closing guide

The best engineering student resume is not the fanciest one; it is the one that clearly shows **skills, projects, and impact** in a format recruiters can scan quickly. If you build it with a simple ATS-friendly structure and strong project bullets, it will look professional and competitive.

Resume template

text

YOUR FULL NAME

Phone: +91-XXXXXXXXXX | Email: yourname@email.com

Location: City, State, Country

LinkedIn: linkedin.com/in/yourname

GitHub: github.com/yourname

Portfolio: yourwebsite.com

PROFESSIONAL SUMMARY

Motivated [year] engineering student specializing in [branch/discipline], with strong skills in [skill 1], [skill 2], and [skill 3]. Built and deployed academic and personal projects focused on problem-solving, clean design, and practical implementation. Seeking an internship/entry-level role in [target role/domain].

EDUCATION

Bachelor of Technology in [Branch]

[College/University Name], [City]

[Month Year] – [Month Year]

CGPA: [X.XX/10] or Percentage: [XX]%

Relevant Coursework:

- [Course 1]
- [Course 2]
- [Course 3]
- [Course 4]

TECHNICAL SKILLS

Programming Languages: [Python, C++, Java, JavaScript]

Web/Frameworks: [React, Node.js, Express, Flask, Django]

BrainStack

Databases: [MySQL, MongoDB, PostgreSQL]

Tools: [Git, GitHub, VS Code, Postman]

Concepts: [OOP, DSA, DBMS, OS, CN, SDLC]

PROJECTS

[Project Name 1]

Tech Stack: [Languages, tools, frameworks]

- Built [brief description of what the project does].
- Implemented [key feature or algorithm].
- Improved [result, performance, usability, or user experience].
- GitHub: [link]

[Project Name 2]

Tech Stack: [Languages, tools, frameworks]

- Developed [short description].
- Integrated [API/database/authentication/feature].
- Added [important functionality].
- GitHub: [link]

[Project Name 3]

Tech Stack: [Languages, tools, frameworks]

- Created [short description].
- Focused on [problem solved].
- Demonstrated [technical skill].
- GitHub: [link]

INTERNSHIP / EXPERIENCE

[Role], [Company/Organization]

[Month Year] – [Month Year]

- Worked on [task/project].
- Used [tools/technologies].
- Achieved [measurable result or contribution].
- Collaborated with [team/stakeholders if relevant].

CERTIFICATIONS

- [Certification Name] — [Platform/Institution]
- [Certification Name] — [Platform/Institution]

ACHIEVEMENTS

- [Hackathon / contest / rank / scholarship].
- [Any leadership or technical achievement].
- [Any notable contribution].

POSITIONS OF RESPONSIBILITY

- [Role], [Club/Team/Organization]
- Managed [activity].
- Led [initiative or event].

EXTRA-CURRICULAR ACTIVITIES

- [Activity 1]
- [Activity 2]
- [Activity 3]

DECLARATION

I hereby declare that the above information is true to the best of my knowledge.

Place: [City]

Date: [DD/MM/YYYY]

Signature: [Your Name]

How to customize it

Use this template in a way that matches your background. If you are a fresher, keep the summary short and make the projects section strong. If you have internship experience, move it above projects and emphasize results.

What recruiters care about most

- Your branch and year.
- Skills that match the job.
- Practical projects.
- Internship or real-world experience.
- Clear, clean formatting.

Strong project bullet formula

Use this structure for every project bullet:

Action verb + what you built + how + result

Example:

- Built a Python weather app using OpenWeatherMap API to fetch live weather data and display temperature, humidity, and condition in real time.

If you are a CSE student

Add these kinds of details:

- Python, Java, C++, JavaScript.
- Web apps, APIs, databases, and GitHub links.
- DSA, OOP, DBMS, and operating systems in skills or coursework.

If you are from another engineering branch

Use your domain-specific tools and projects:

- ECE: MATLAB, embedded systems, signal processing, circuits.
- Mechanical: CAD, simulation tools, design projects.
- Civil: AutoCAD, structural design, survey projects.
- Electrical: circuit analysis, power systems, lab projects.

Final formatting tips

- Keep it to one page unless you have strong internship and research experience.
- Use a professional email only.
- Put your best project first.
- Keep bullet points short and sharp.
- Save as PDF when applying.
